

ABHINEET Demo Lab

Three client-facing interactions, built to be used - not just viewed.

Healthcare booking, contractor qualification, and agency intake. Each demonstration isolates one operational problem and turns it into a working responsive flow.

01 CLINIC BOOKING

02 PROJECT ESTIMATE

03 CLIENT INTAKE

Northline Physio

Need-to-appointment flow

THE OPERATIONAL PROBLEM

Clinic visitors often start with a symptom or goal, while booking tools start with practitioner names and times. Reception then has to repair the missing context.

WHAT THE INTERACTION DEMONSTRATES

A visitor chooses the closest reason for attending, receives the relevant visit type, selects a slot, and carries clear context into the next step.

A BOUNDED PAID TEST COULD INCLUDE

One pre-booking decision layer, up to four approved paths, one existing booking or enquiry handoff, responsive states, analytics hooks, and handover.

OPEN LIVE EXPERIENCE ->

Field & Form

Project-fit estimator

THE OPERATIONAL PROBLEM

Contractor forms collect contact details before establishing whether scope, location, timing, and budget belong in the same conversation.

WHAT THE INTERACTION DEMONSTRATES

A prospect adjusts project type, area, and finish level, sees an explicitly non-binding range, and creates a more structured brief.

A BOUNDED PAID TEST COULD INCLUDE

One estimator, up to four approved input groups, client-supplied rules, disclaimer states, one lead destination, deployment, and editable-rule handover.

INDICATIVE BUILD RANGE

\$88,000 - \$113,000

Non-binding demonstration range

Relay Intake

Structured client handoff

THE OPERATIONAL PROBLEM

Studios lose delivery time when project context, files, decision-makers, and approvals are distributed across email, chat, forms, and memory.

WHAT THE INTERACTION DEMONSTRATES

A client sees what is complete, what is missing, the next decision, and readiness for handoff without introducing a full project-management platform.

A BOUNDED PAID TEST COULD INCLUDE

One approved intake or approval lane, progress states, one notification or data handoff, studio branding, deployment, and operating handover.
